

HQExo™ Exosome-488-MSC

Catalog: Exo-F488-MSC

PRODUCT INFORMATION

Name HQExo™ Exosome-488-MSC

Cat No. Exo-F488-MSC

Source Fluorescent labeled exosome derived from MSC from human adipose tissue

Product Overview

Exosomes are small extracellular vesicles with sizes of 30-160 nm, which is a subtype of extracellular vesicles (EVs). Exosomes are secreted by all cell types and play a crucial role in intercellular signaling and communication. Exosomes are nano-sized shuttles that transport signaling RNAs, lipids, peptides and proteins to other cells. Studying exosome contents to get an insight into their roles in disease initiation and progression. HQExo™ exosomes/microvesicles labeled with a lipid dye could use as positive controls for FACS and fluorescence microscopy. Exosome can be purified by ultracentrifugation and characterized by nanoparticles tracking analysis (NTA) and ELISA or WB. Lyophilization is useful for a long-term storage at 4°C, and frozen liquid should be kept at -20°C to -80°C. Creative Biostructure standard exosome products guarantee higher purity and quality to meet our customer's downstream analyses.

Form Lyophilized powder/ frozen liquid

Concentration >1x10⁶ particles

Storage Store at -20°C or colder. Recommend to avoid repeated freeze-and-thaw cycles.
